DIGITAL LITERACY PROJECT REPORT

Name: Kushagra
Registration Number: 25BAI11055
Branch: B.Tech CSE-AI/ML
Course Code: CSE0001
Year: Fresher
Course Title: Digital Literacy
University: VIT Bhopal
Date: 31/03/2026

Introduction

In today's digital world, having basic digital literacy is essential for every student. This project was assigned as part of the Digital Literacy course to help us understand how to use online platforms safely, effectively, and professionally. As a Student Digital Ambassador, the goal was to explore different digital tools and create resources that can help other students improve their online presence and awareness.

Through this project, I worked on creating an infographic, building professional profiles, exploring coding platforms, learning email etiquette, and understanding cybercrime risks. Each task helped me gain practical knowledge about how digital platforms work and how they can be used in academic and professional life. This project not only improved my technical skills but also made me more aware of responsible digital behaviour.

Task 1 – Infographic

For this task, I created a digital literacy infographic using Canva. The purpose of the infographic was to explain the concept of digital literacy in a simple and visually appealing way. I included key topics such as the meaning of digital literacy, commonly used digital tools for students, safe internet practices, and the importance of maintaining a professional online presence.

The design was kept clean and structured so that anyone can quickly understand the information. I used icons, headings, and short points instead of long paragraphs to make the content more engaging. This helped in making the infographic more effective as a quick learning resource.

While creating the infographic, one challenge I faced was organizing the content in a limited space without making it look cluttered. However, this also helped me learn

how to present information in a concise and visually appealing manner. Overall, this task improved my creativity and design thinking skills.

Task 2 – Digital Portfolio

In this task, I created and updated my profiles on important digital platforms including GitHub, LinkedIn, and Kaggle. These platforms are widely used by students and professionals for showcasing their skills, networking, and practicing coding.

GitHub is mainly used for storing and sharing coding projects, and I created a profile README to introduce myself. LinkedIn is a professional networking platform where I added my education details to build a formal online presence. Kaggle is a coding practice platform where I can improve my problem-solving skills.

Creating these profiles helped me understand the importance of having a professional identity online. Over the next four years, I plan to regularly update my GitHub with projects, stay active on LinkedIn to build connections, and practice coding on Kaggle to improve my technical skills. This task made me realize how important it is to start building a digital portfolio early in my academic journey.

Task 3 – Platforms

In this task, I explored both coding and collaboration platforms. For the coding part, I used CodeChef and completed a beginner-level problem. This helped me understand how coding platforms work and how problems are structured. While solving the question, I learned how to think logically and break down a problem into smaller steps, which is very important in programming.

For the collaboration part, I created a Google Form as a Digital Literacy Awareness Quiz. The form included five questions related to digital literacy topics such as online safety, password security, and the use of professional platforms. I also connected the form to a Google Sheet so that responses could be collected and analysed easily.

This task helped me understand how these platforms can be used in real academic situations. Coding platforms like CodeChef are useful for improving programming and problem-solving skills, while tools like Google Forms are helpful for conducting quizzes, surveys, and collecting data efficiently. Overall, this task improved my understanding of practical digital tools and how they can support both individual learning and group activities.

Task 4 – Email Etiquette

In this task, I learned how to write professional emails and understood the importance of proper communication in an academic and professional environment. I

drafted two emails — one for requesting an assignment extension and another for applying for an internship.

I also created a social media checklist highlighting the do's and don'ts of responsible online behaviour. One common issue with digital communication is that people often write emails in an informal or unclear way, which can create misunderstandings. For example, a poorly written email without a proper subject or greeting can appear disrespectful.

This task taught me that clarity, politeness, and structure are very important in communication. Using a proper subject line, greeting, and closing makes a big difference in how the message is received.

Task 5 – Cybercrime Awareness

While working on this task, I researched UPI fraud, which is a very common type of cybercrime in India. What surprised me the most was how easily people can be tricked into sharing sensitive information like OTPs or approving fake payment requests.

I realized that most frauds happen because of a lack of awareness rather than technical issues. Simple mistakes can lead to serious financial loss. This made me more cautious about how I use digital payment platforms.

As a result of this task, one habit I will change is being more careful before clicking on links or responding to unknown calls. I will also make sure never to share personal or banking details with anyone. This task increased my awareness about online safety and responsible digital behaviour.

Conclusion

Overall, this project was very useful in helping me understand the importance of digital literacy in today's world. It gave me practical experience with various digital tools and platforms that are essential for students. I learned how to create a professional online presence, communicate effectively, and stay safe online. Each task contributed to improving my technical, communication, and awareness skills. This project has prepared me to use digital resources more confidently and responsibly in both academic and professional environments.
